

TERAZZO

UNIQUE. ELEGANT. CLASSY

TERRAZO FINISHES

A composite material of marble chip-pings set into cement which is used for flooring, base, walls, stair treads, countertops, and other custom products, terrazzo originated in Italy as a way to reuse stone offcuts. Terrazzo consists of chips of marble, granite, quartz, glass, shell or other suitable materials. It uses either a cement or epoxy matrix as the binder.

If you are looking for a elegant and unique floor, look no further than terrazzo flooring. Since terrazzo floors are not very common, they add to the value of your premises as well.

A terrazzo floor is extremely durable. These floors are waterproof and require very little maintenance. Terrazzo is also a sustainable decorating option. It is a great choice for underfloor heating.

It is either poured in situ by hand or precast into blocks that can be cut to size. Once sealed to ensure water resistance, it can be applied to any interior wall or floor, including kitchens and bathrooms. Terrazzo retains warmth effectively.
