

EPOXY FLOORING

GLOSSY. SEAMLESS. VERSATILE

EPOXY FLOORING

Epoxy floors are seamless, highly versatile and available to be produced in a wide range of colours, styles, effects and decorative options. These properties make them suitable for industrial and commercial facilities and locations.

This type of flooring is created with a mix of coloured epoxy and selected aggregates. After setting the mixture, the flooring is ground and polished, exposing the aggregate and delivering a smooth, decorative and hard-wearing floor finish.

Epoxy floors are not just highly decorative and very durable, they only require simple maintenance and have an outstanding life expectancy (upwards of 40 years).

As one of the most versatile flooring options, epoxy flooring is great for a variety of environments such as industrial, commercial, medical, food and beverage manufacturing, aviation, recreational, healthcare, transportation, manufacturing, educational, grocery, retail and many more.
